

Remote control tractor-trailer rollover test

On-board ride  
testing equipment  
and systems

Outside its modern crash-test facility, CAPE engineers help customers answer complex questions at their facilities, in the field or at off-site proving grounds. With specialized instrumentation, portable data acquisition systems and high quality video systems, CAPE equips vehicles for accident reconstruction, studies of restraint performance and comfort assessments, as well as input on airbag sensor development. With CAPE expertise and specialized equipment, customers can meet a wide variety of testing objectives in a wide variety of testing environments.
